

# ASAM OSI Flatbuffers Report

## Summary

Martin Kirchengast

# Background

---

- Current OSI: Protobuf for (de)serialization
- Change to Flatbuffers in consideration (idea: faster data access)
- Evaluation by Persival
  - [Application Report](#)
  - [Performance Report](#)

# Application Report

- Flatbuffers: library for (de)serialization
- Access serialized data without parsing / unpacking → fast, small memory footprint
- Data structure definitions:
  - Interface Definition Language (IDL)
  - Automatic conversion of proto-files to IDL
  - Compiler (flatc): C++ headers for usage
  - Message (proto)  $\leftrightarrow$  Table / Struct (flat)
  - Structs: faster access, no backward compatibility if extended
- Copying SensorView to SensorData currently not possible
- Two ways of using Flatbuffer
  - **Builder API:** standard
  - **Object API:** like Protobuf, slower than builder
- Builder-API
  - Fill data structures inside-out
  - More lines of code than Protobuf
  - No explicit serialize-call (builder.finish)
- Object API
  - More intuitive for Protobuf users, mutable
  - Lower performance, not recommended
- Example conversion on [Github](#)
  - OSMPDummySource FMU
    - Creates SensorView
    - Creates + adds N MovingObjects
    - Positions & velocities depend on simulation time
  - OSMPDummySensor FMU
    - Receives SensorView
    - Filters objects (range, FOV)
    - Creates new objects in SensorData

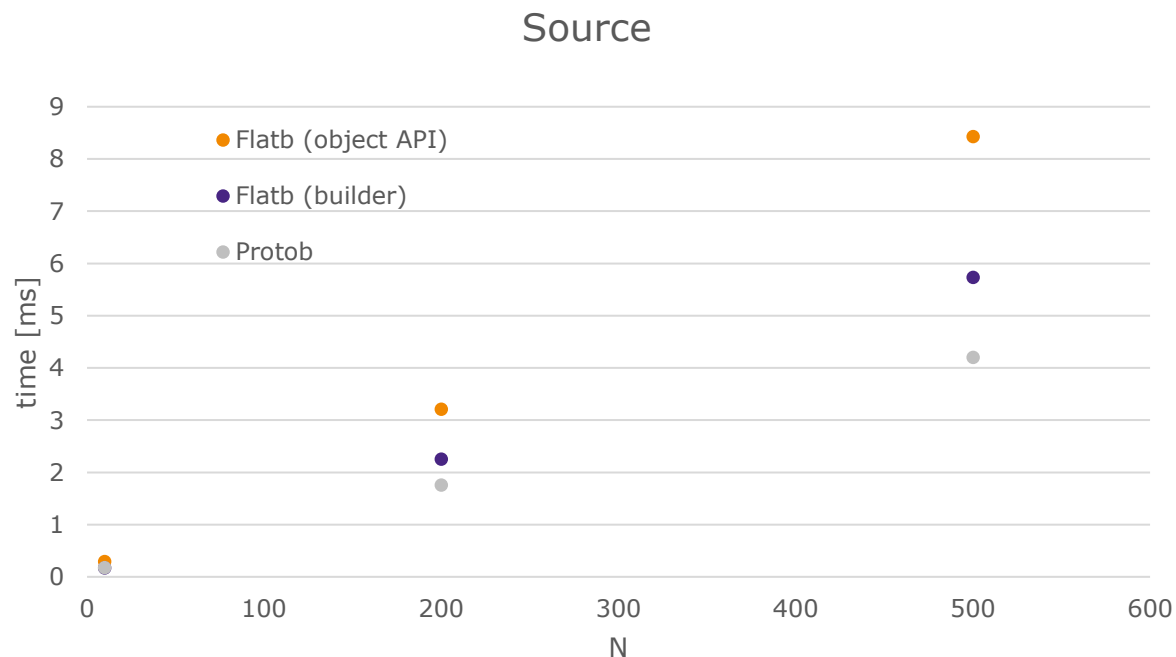

# Performance Report

- Compares Protob. and Flatb. versions of FMUs
- Timing measurement in FMU code
  - Source
    - Generation
    - Serialization
  - Sensor
    - Deserialization
    - Calculation
    - Serialization
- Avg. over 100 time steps
  - Ok for Lidar tests
  - Too short for object list tests (high fluct.)
  - 5000 time steps for own object list tests
- Test cases
  - Lidar reflections (100k, 400k, 830k)
  - Moving objects (10, 200, 500)
  - Debug vs. Release
  - Builder vs. Object API
  - Tables vs. Structs

Evaluation Subject	Flatbuffers		Protobuf	
	Source in ms	Model in ms	Source in ms	Model in ms
829,440 reflections, 10 objects	43	9	27	66
400,000 reflections, 10 objects	20	4	13	32
100,000 reflections, 10 objects	5	1	3	8
10 objects	0	0	0	0
200 objects	1	1	1	1
500 objects	2	2	2	2
Debug build	352	117	132	258
Flatbuffers Object API	68	9	-	-
Reflections, Vector3D etc. as Structs	28	5	-	-
Trace File Player (700,000 refl.)	1	7	7	49

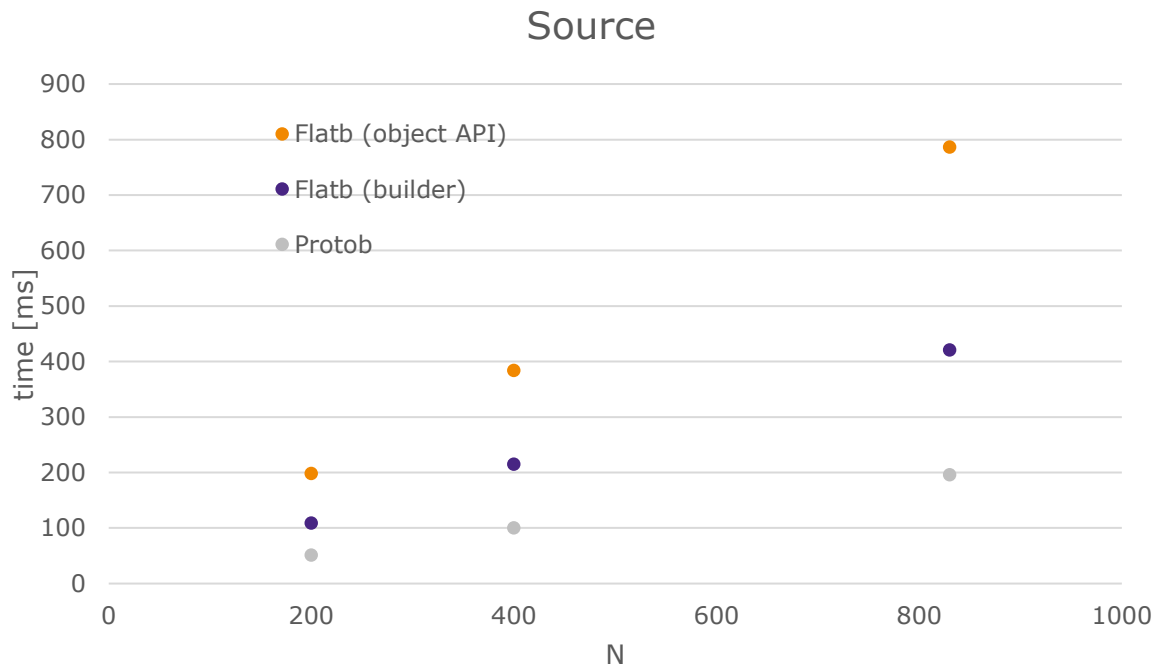

# Performance testing, 1<sup>st</sup> run – objects

- Based on **original branches created by Persival** (*feature/flatbuffers\_examples*, *flatbuffers\_object\_api*)
- Two issues:
  - Some Lidar data structures always created (in case of no received reflections)
  - Same results for sensor with Builder-API and Object-API
    - Code diff.: **DummySensor was not converted to Object API** → INVALID comparison
- Modification of DummySensor:
  - Use only Object-API (in corresponding branch)
  - Avoid unnecessary Lidar data structures

# Performance testing, 1<sup>st</sup> run – Lidar

- Based on original branches created by Persival (*feature/flatbuffers\_examples*, *flatbuffers\_object\_api*)
- Same issues as for object list tests

# Performance testing, 2<sup>nd</sup> run – objects

- Based on **modified branches**
- Different results for Builder-API and Object-API (as expected)
- Flatb. with Object API: slowest execution time for source and sensor

## Remark:

- Flatb. (Object API) could be used for internal object representation (update objects instead of recreating)
- This was examined after adaption of DummySource and DummySensor (**object API, update**)

# Performance testing, 2<sup>nd</sup> run – 10 objects

## Persival report

DummySource (REPORT)			
	<i>Protob [ms]</i>	<i>Flatb (builder) [ms]</i>	<i>Flatb (object_API) [ms]</i>
Generate	0,000	0,000	
Serialize	0,000	0,000	
<b>Total</b>	<b>0,000</b>	<b>0,000</b>	<b>0,000</b>

DummySensor (REPORT)

# Performance testing, 2<sup>nd</sup> run – 500 objects

## Persival report

DummySource (REPORT)			
	<i>Protob [ms]</i>	<i>Flatb (builder) [ms]</i>	<i>Flatb (object_API) [ms]</i>
Generate	2,000	2,000	
Serialize	0,000	0,000	
<b>Total</b>	<b>2,000</b>	<b>2,000</b>	<b>0,000</b>

DummySensor (REPORT)			
	<i>Protob [ms]</i>	<i>Flatb (builder) [ms]</i>	<i>Flatb (object_API) [ms]</i>
Deserialize	0,000	0,000	
Calculation	2,000	2,000	
Serialize	0,000	0,000	
<b>Total</b>	<b>2,000</b>	<b>2,000</b>	<b>0,000</b>

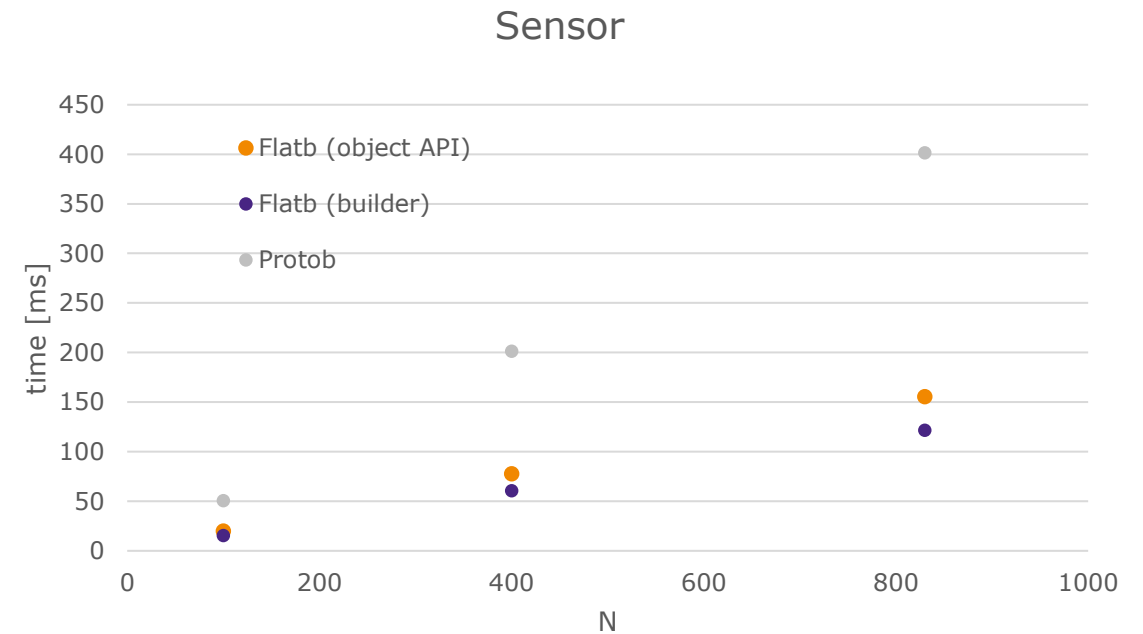

## Own experiments

DummySource				
	<i>Protob [ms]</i>	<i>Flatb (builder) [ms]</i>	<i>Flatb (object_API) [ms]</i>	<i>Flatb (object_API, update) [ms]</i>
Generate	3,391	5,761	4,828	2,447
Serialize	0,822	0,018	2,881	2,925
<b>Total</b>	<b>4,21372</b>	<b>5,77912</b>	<b>7,709</b>	<b>5,372</b>

DummySensor				
	<i>Protob [ms]</i>	<i>Flatb (builder) [ms]</i>	<i>Flatb (object_API) [ms]</i>	<i>Flatb (object_API, update) [ms]</i>
Deserialize	1,544	0,016	0,020	0,015
Calculation	5,042	6,319	6,991	4,833
Serialize	1,104	0,015	1,323	1,346
<b>Total</b>	<b>7,69051</b>	<b>6,34965</b>	<b>8,334</b>	<b>6,194</b>

# Performance testing, 2<sup>nd</sup> run – Lidar

- Based on **modified branches**
- Different results for Builder-API and Object-API (as expected)
- Different results for source and sensor
  - Source: Flatb. (Object API) slowest
  - Sensor: Protob. slowest, due to Deserialization

# Performance testing – 100k lidar reflections

## Persival report

DummySource (REPORT)			
	<i>Protob [ms]</i>	<i>Flatb (builder) [ms]</i>	<i>Flatb (object_API) [ms]</i>
Generate	2,000	5,000	
Serialize	1,000	0,000	
<b>Total</b>	<b>3,000</b>	<b>5,000</b>	<b>0,000</b>

DummySensor (REPORT)			
	<i>Protob [ms]</i>	<i>Flatb (builder) [ms]</i>	<i>Flatb (object_API) [ms]</i>
Deserialize	3,000	0,000	
Calculation	4,000	1,000	
Serialize	1,000	0,000	
<b>Total</b>	<b>8,000</b>	<b>1,000</b>	<b>0,000</b>

## Own experiments
